

High Performance Rheology Modifier and Mix Stabilizer

Argos U.S. Testimonial

Active Minerals, Paul Fendley and Josh Hare, introduced the Argos Ready Mix team to Acti-Gel® 208 and the shotcrete application. Argos USA and the Active Minerals team partnered up to present the shotcrete application to a large precast tank builder. This tank builder was having to use 150 cubic yards of their standard shotcrete mix to get 100 cubic yards to stay on the walls with severe rebound and waste. When the Argos/Active Minerals team introduced the new shotcrete to the precast tank builder, we quickly realized that the rebound/waste was held to a minimum, saving the precast tank builder 40 cubic yards of concrete on a 150 cubic yards pour, not to mention time and labor savings. The Argos/Active Minerals team delivered a solution to this large precast tank builder that will last. Argos is proud to be a business partner with Active Minerals and excited to explore all the many other solutions Acti-Gel® 208 offers.
