Mobigrip Keeps Electronics on Leash
Reno, Nev.-based Mobigrip has introduced the Mobigrip device leash for handheld electronic devices. Mobigrip is

an assistive disc with an integrated bungee, and it attaches easily to almost any handheld device, including cell phones, iPods, digital cameras, remote controls and more. Mobigrip's bungee gently secures the electronic device to the user's finger and helps keep it secure in the palm of the hand.

Manufactured in the United States, Mobigrip is designed for easy application: Users simply peel, stick and secure the Mobigrip to a portable electronic device. Furthermore, the Mobigrip is removable, leaves no residue, and is available in a wide range of colors and patterns.

For more information, visit www.mobigrips.com. ■
