

ClotIt VET

Total Clinic Approach

Comprehensive, Superior, Patented, and Affordable Hemostasis Platform

ClotIt VET

ClotIt® is the most comprehensive, effective, and versatile brand of hemostatic products to be used in the Veterinary Clinic.

The ClotIt Total Clinic Approach presents this hemostasis platform in three different segments:

- 1) Internal surgical (sterile) products
- 2) Professional in-clinic (non-sterile) use
- 3) Affordable Take-Home (non-sterile) Animal Medical Kits (AMK) for your clients

ClotIt VET (in-clinic) Sterile Single-dose Hemostatic Powder:

Sterile, surgical-grade hemostatic powder with two application types of applicators for precision or broad treatment. Each box contains 6 sterile applicators.

ClotIt Professional (in-clinic) Non-Sterile Powder:

Non-sterile powder for external procedures such as road rash, nail clipping injuries, skin biopsies, minor dental procedures, etc.

Take Home ClotIt Animal Medical Kits with ClotIt (Non-Sterile) Powder:

Animal Medical Kits (AMK) are great for educating your clients in proactive animal emergency care. The ClotIt AMK co-brands your clinic info and gives your clients the tools they need to care for a wound in an emergency. These nylon pouches are wound treatment kits for your customers to keep at home and on the go. A small bottle of ClotIt powder (with no expiration date) along with wound wash, gauze, and tape will help your customers get their wounded pets safely to the next level of care or back to you for treatment in case of an emergency.

Purchasing a counter unit of ClotIt Animal Medical Kits to sell to your customers, will provide revenue for your practice to defray the cost of ClotIt VET. And, it will provide your clients with the most effective every day and emergency hemostatic product to confidently use in any bleeding situations.

ClotIt Total Clinic Approach: All products
