

THE FUTURE OF HOUSING

Thursday, Aug. 8 | 9:30 AM | Gaylord Texan

Larry Haines, the founder of Sunconomy, a company that produces 3D-printed homes, and Dr. Robert Dietz, National Association of Home Builders' (NAHB) Senior V.P. and Chief Economist will share the stage Thursday morning. The duo will focus on the future of housing.

Haines will educate Sunbelt attendees on what 3D-printing home construction is and its future as an alternative to the traditional sticks and bricks-built homes. Sunconomy is designing and building 3D-printed homes and teaching other contractors and real estate developers how to build affordable homes that will last centuries.

Dr. Dietz will provide the latest economic trends and updates affecting the residential homebuilding industry. At NAHB, his responsibilities include housing market analysis, forecasting, and home construction analysis and trends. After learning from these futuristic thinkers, attendees will walk away with information on innovative building techniques and the prospective housing economy.
