DATACARD® WebID™ IDENTITY INFORMATION SOFTWARE

Corporations, schools, government agencies and other organizations trust WebID software to help improve security and reduce costs in large, complex, enterprise-level secure ID programs.

Improve security and reduce enterprise costs

Datacard® WebID™ identity information software provides a secure, cost-effective solution for successfully managing enterprise-wide ID programs. It allows you to access ID photos and other enrollee information from a centralized Internet database, making it easier than ever to enroll cardholders, issue secure IDs, verify identities and manage enrollee data from any Web-connected workstation in your enterprise.
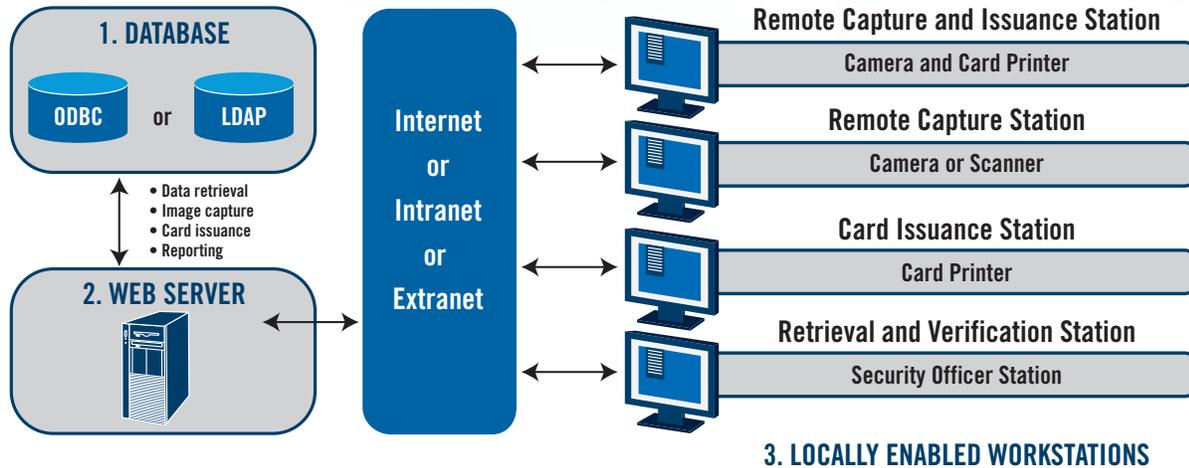

Streamline enrollment, issuance and data management

- Minimize operating and maintenance costs by managing a single database.
- Provide security teams with real-time information to help improve decision-making, and help ensure every facility has access to the latest card designs for each type of enrollee.
- Allow multiple users to access the database simultaneously and respond to security needs immediately.
- Integrate seamlessly with emergency incident software from Salamander Technologies with the First Responder module.
- Promote fast, accurate enrollment with pre-defined list fields, drop-down menus, data-driven condition selection and other features that improve ease of use.
