

KEY MANAGEMENT

Simplified Physical Key Management

With TotalCard Key Management, keeping up with physical keys is a challenge of the past. Users can present their ID card to gain access to a key storage unit in any building. Authorized cardholders can then remove sets of master keys for that building, one at a time and return them when they are finished using them. The system allows for electronic reporting of key removal and automatic alerts if the keys are not returned in the allotted time frame.

“Before we started using TotalCard for Key Management, our maintenance staff had to carry key rings with dozens of keys to access all of the necessary doors on campus. With TotalCard, they simply scan their ID at the key box and select the key they need within the building. It saves them time and gives us access to reports of who has which set of keys.”

Campus Facilities Manager

Key Features & Benefits:

- Simplified master key check-out
- Electronic reporting
- Automatic notification of missing keys

Additional TotalCard Modules:
