

HUNTER SERIES “Native Warm Season Grass Attachment” (NWSG KIT)

By PLOTMASTER™

H-6-NWSG-101-11

The NWSG Kit with new Versa-Seeding System is designed to keep small, fluffy seed including grass seed and NWSG’s within the perfect planting zone (behind disc and in front of the drag and cultipacker).

Suggested Retail: \$604.00

You can disc, plant, cover and cultipack all at the same time. This will allow you to plant NWSG’s and other grass seed in a single pass – saving valuable time, money and effort!

Using the NWSG Curtain in tandem with the Metal Grating is easy and simple to achieve. Attach the NWSG Curtain to the Seeder and then remove the hair -pin clip from the Drag Bar’s stow away point and release the metal drag. If you choose to use only the metal drag then you will leave the cultipacker roller in the folded position. Once you have set your unit to the desired position you are ready for seeding. With this set-up you can cover grass seed and lofty type seeds with ease.

The 2 - (2) Piece bracket set comes complete with Curtain, Curtain Weights and Hardware for mounting. Just simply attach the bracket “tab” in the existing top bolt hole of the “Y” Bracket mount that secures the seeder assembly to the “Y” mount.
