

Removing access in Google Tag Manager

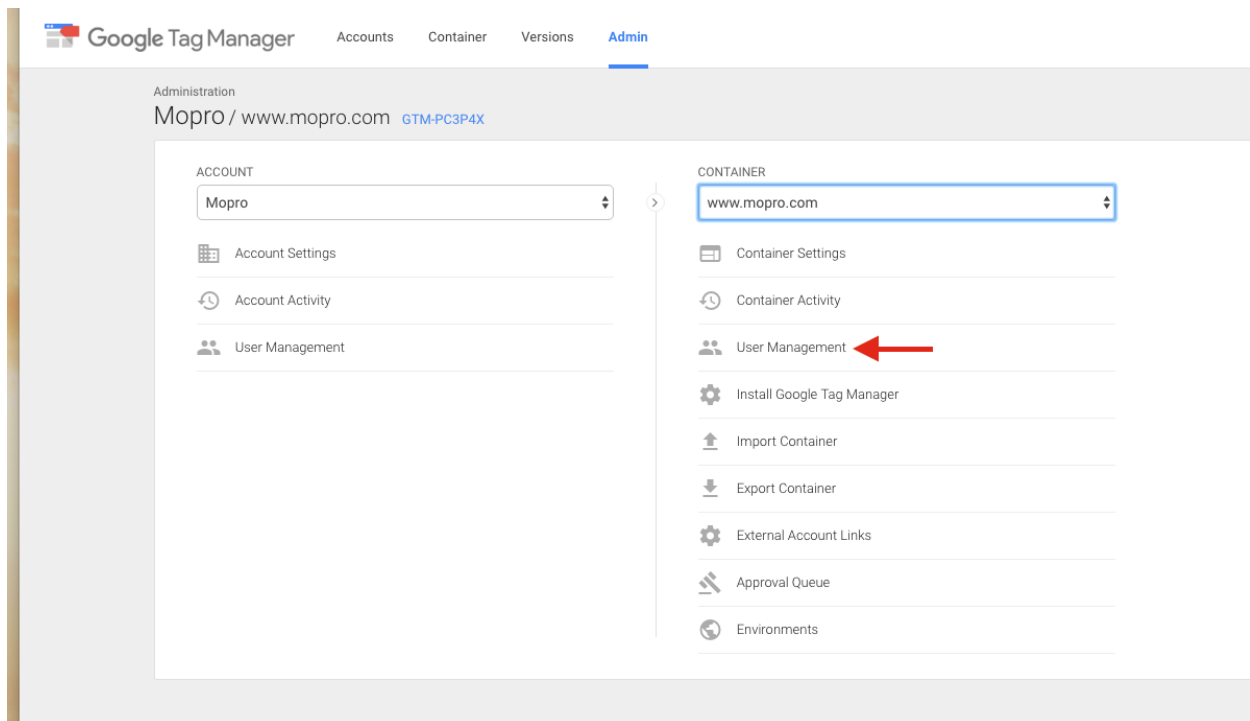

Once you've sent us all the codes you'd like on your website, we encourage you to remove Mopro's access to your Google Tag Manager. If at any time you'd like to add more codes, you can easily grant us access again.

Here's how to remove access:

1. Navigate to tagmanager.google.com
2. Select "Admin" from the top navigation bar

3. In the "Container" column, select "User Management"

4. Select the user you'd like to remove (tracking@mopro.com)

5. Select "Delete." You've successfully removed access.
