

# Mobile Solutions 7.6 Software

*Updates Available April 2016*

Like most everyone, Elliott had a few inches to trim off their Mobile Solutions waistline. Our development team made a new year's resolution to get our software into better shape and improve the health of our solution. So we've stretched, tightened, and toned some key components of the Mobile Solutions software making it stronger than ever!

## Web Based Reporting

As we continue to make our product "thin" and "flexible" by embracing both web based design and robust data syncing for on-line/off-line scenarios, our newly improved report module was a key component.

We'll be building off of this and adding in additional reports now much easier than before.

## QR Code for Badging

Elliott's core philosophy for identification revolves around a guaranteed unique identifier that leverages a robust database to retrieve additional info such as demographics, certifications, attachments, assets, etc.

Now you can use QR barcodes to store this number and allow for the best scanning experience using today's mobile phone devices.

## Handheld Updates

While our focus has been to get our Mobile Solutions App out for much of this year, it was time to go back and do some updating on our legacy handheld platform.

Our goal was to strengthen performance and stability and provide additional functionality to support our hosted service offerings.

## Fine Tuning

Lots of fine tuning and bug fixes have been made including enhancing the ability to add assets to groups, inventory assets from outside of a given system, and about 50 more tweaks that have strengthened the core of Mobile Solutions software.

## What Should You do with this Information?

1. Schedule an update of your Mobile Solutions software by contacting Elliott Support 1-866-340-9644 or [support@elliottdata.com](mailto:support@elliottdata.com)
2. Share this information with your technical team.
3. Contact Elliott for more details or with any questions you may have.
