

# The Formula

“Community” is a rich citrus-based, fresh scent with Bergamot and mandarin developing into a fresh and elegant sensual heart. Ingredients have been sourced from some of the best European factories ensuring the highest levels of sustainability and quality and promoting biotopes around the world. The fragrance is meant to embody dynamism and optimism with solid reassuring foundations. It represents a feeling of togetherness, to encourage people to rally into a safe haven. It features European environments, from crisp Nordic air, off-shore sea breeze, wet stones and moss, majestic forests and sculpted woods combined with essences of Mediterranean uplifting and colorful feelings.

Aldehyde C-12 1%	0,50	Crisp fresh molecule, to recreate fresh nordic arctic air feeling which obviously cannot be extracted and bottled in nature.
Ambrox® Super Pure	2,00	Soft blond elegant wood, a molecule as expensive as natural Jasmine for instance.
Bergamot Oil Italian	7,00	Bergamot plantations are one of the very few valuable plantations in Calabria, a poverty stricken region in Southern Italy. This helps European farmers and preserves the beautiful natural landscape in that region.
Bitter Orange Leaves Essence	0,50	A safe reassuring classic in perfumery, found in colognes from Italian monasteries to the German city of Cologne or Paris, from the Renaissance until today.
Calone®	0,40	To recreate the freshness from the seabreeze which can not be extracted and bottled. Beautiful, inspiring.
Cascalone®	0,20	Freshness from mountain cascades and streams, this molecule recreates that breath of fresh moist air feeling.
Cedarwood Oil Steamed Distilled	5,00	A nice polished wood, reassuring and safe.
Chamomille Blue German 10%	0,10	This variety smells naturally more like a rich gateau, not like traditional medical chamomille, yet still a natural ingredient.
cis-3 Hexenol	0,40	Found in 99% of green plants and foliage, naturally, springy optimistic note.
cis-3 Hexenyl Acetate	0,10	Responsible for the dewy aspect of natural green foliage.
cis-6-Nonenol 10%	0,15	Found in French or Spanish melons or Polish and Finnish cucumbers. Has to be made molecularly without the rest of the pulp, as melon extract would rot and ferment right away.
Ciste Absolute Spain Biolandes	0,60	A very typical mediterranean plant, responsible for some of the greatest perfumes of all times. Different suppliers carry different qualities and distillation cuts.
Clove Oil English	0,50	Spice for warmth and elegance, adds complexity to the woods.
Corps Guava 0.001%	0,20	Like salt in a cake, a tiny pungent note, bringing a je-ne-sais-quoi. Used at minute infinitesimal levels. Extremely strong so has to be diluted in a solvent to be able to use it, like you dilute a pigment in white paint to get its real color, or a drop of pungent almond extract in a cream to open all its flavour.
Cyclemone A	0,50	Lush green freshness (no, we do not extract the rain forest, it is made in the lab from safe ingredients to protect natural biotopes).
Damascone Alpha 10%	0,40	A green apple fresh molecule. Natural apple extracts are too weak as there is not enough essence (oil) in an apple and the fruit itself is very fragile.
Dihydro Myrcenol	2,00	Like glass in architecture, can be turned into a vulgar jar (toilet cleaner) or a beautiful fragrance (Cool Water) depending on how it is worked or associated.
Dihydro Myrcenol P	1,00	Different qualities, bring different reflexions to the fragrance.
Ethyl Linalool	5,00	With its cousin Linalool, another green foliage/wet freesia note. Does not evaporate as much as Linalool, so that you don't have to re-spray your fragrance on skin or on clothing every half hour.
Evernyl®	0,70	A mossy note to try to replace the, alas, disappearing Real oakmoss cultivated in France, Corsica and Dalmatia, disappearing because of regulations, yet oakmoss was responsible for some of the greatest fragrances and memories of the past century. An immaterial, yet very real, World Heritage which should be identified and preserved instead of being crossed out from the map. You will never smell your past ever again! A world tragedy.
Floralozone®	0,60	To impart more watery strength to the scent.
Floral® Neo	2,20	A nice Lily of the Valley note. Lily of the Valley can be extracted, yet it rots like a peeled banana or apple within 24hrs and smells like stale water in a vase. So its extract has never existed in perfumery (even Diorissimo has none, only man-made molecules). Chemists have recreated such notes to be able to enjoy Lily of the Valley scent (Muguet) everywhere in our lives.
Galaxolide® Extra 70%	5,00	To feel your are floating on a soft cloud without killing musk dears or eider ducks.
Grapefruit Oil	3,00	A nice fresh note, but note that grapefruit, once extracted, smells of oranges, the grapefruit twists disappearing after extraction because they are so fragile and volatile. So see below how it is spiked.
Hedione® High Cis	10,00	A delicate jasmine note (there would not be enough jasmine in the world to fragrance all people and places). Beside Jasmin can be very strong at times. So Perfumers have different chords in their palette.
Hedione®	15,00	A more watery variant of the above.
Heliopropanal	3,00	A watery note smelling of melon and of water/dew, less sweet fleshy fruity.
Hivernal® Neo	0,20	To get strength, brightness in a scent even among the backnotes.

# The Formula

Irone	0,20	A molecule more expansive than pure jasmine. Beautiful, soft wood feeling. A touch creamy. Know-how is definitely European.
Iso E Super®	25,00	A soft woody molecule, gives elegance to a fragrance, long lastingness yet with lightness and preserving the forests around us.
Lemon Oil Sfumatrice Italian	8,00	The European Community is a great producer of some of the most refined lemon oils on the planet.
Lemon TetrArome	2,00	A little Lemon concentrate to give body and color to Lemon Oil which smells very volatile and transparent compared to other ingredients such as woods or musks.
Liffarome®	0,10	A green note, not found in nature, but to recreate the feeling of a crunchy leaf and outdoor feeling.
Lilial®	3,80	Another Muguet/Lily of the Valley note. Very old in Perfumery. Molecules have been used since 1880's. Shalimar and Chanel #5 have contained molecules not found in nature from the very beginning of their creations in the 1920's.
Mandarin Oil Yellow Sfumatrice Italian	2,00	The best mandarins essences (green, yellow and red) in the world come from the European community.
Mayal®	2,00	Another Lily of the valley note, this one to link between floralcy and dewyness.
Melonal® 10%	0,10	A strong note but great to link melony notes to green note in a continuous crescendo.
Menthethiol 0.001%	0,50	Extremely powerful, found naturally in Grapefruit, but recreated on the side to spike Grapefruit Oil which smells like orange after natural extraction and turn in back into a grapefruit scented oil.
Methyl Ionone Gamma Coeur	1,00	A soft note which brings good-feeling memory and atmosphere of safe reassurance to most people.
Musc Ketone Pure	0,20	A very old and safe musk used to give this nuzzly feeling to your scarf or to your grand-mother's fragrance.
Musconone Delta	0,10	Completes the modern fluffy cloud feeling.
Nigelle Superfluid Co2 Extract France	0,20	A grass extracted in the South of France which has a bright honey goldness to it, like shimmering/scintillating.
Nonylenic Aldehyde 0.01%	0,20	To reinforce the blond wood effect. Found in iris roots.
Orris Roots Natural Headspace Alive	1,00	To recreate a soft blond wood feeling without its dryness.
Pamplocoeur Base D	1,00	Another spike to the Grapefruit/Tangerine notes.
Paradisone®	10,00	A supreme jasmine watery note.
Patchouli Oil Clear	0,30	Give a little touch of color to the woods, in small quantity not to give any Patchouli feeling to the composition.
Patchouli Oil Darker	0,20	Same, another shade of woods, and long lasting on skin and fabric.
Peppermint oil Grasse	0,30	Gives sparkling, at a dosage to provide brightness but below one that would make one detect peppermint.
Rose Oil Otto Bulgarian	0,30	Another big monument of Perfumery, one of the most worshipped in the world.
Rosemary Organic Spain (Bio) Superfluid Extract	0,40	Spain is THE rosemary specialist in the world for perfumery and pharmaceutical use. Rosemary is also a very good antibacterial agent, like many other fragrance ingredients including vanilla, clove and rose.
Safraline	0,40	A unique molecule, adds a touch of mystery, but keeping things fresh.
Tamarine Base	1,00	Optimism in its pure form, corsican clementines and spanish tangerines together.
trans-2-Hexenal 10%	0,10	Found naturally in apples, very lush and juicy, wish more could be used if allowed by regulations.
Vanillin 10%	0,40	At this low dosage, gives a notion of reassurance and softness, no sweetness.
Vetyver Oil Haiti	2,00	To bring elegance to all the woods, and to help our farmer friends in Haiti.
Zestover	0,20	Another green foliage note, more forest like than the natural green grass effect, diffusing more and providing your nose with a better interpretation of European outdoors, from pine forest in Scandinavia to the Alps.
