

# Talk about a powerful display...

## THE LATEST IN MOBILE WORKSTATION POWER A Display That Powers Your Cart

**No, it's not an AIO!** It's a medical grade, hot-swap battery powered display designed to be used as a primary power source. This allows you to utilize your standard issue device in a small, lightweight, infection control cart configuration.

A fanless, bacteria-resistant enclosure designed for medical applications with enough power and outputs to run your DC device, mobile printer and/or other peripherals.

Utilize the optional front camera to achieve a low cost telehealth solution in applications where an expensive PTZ camera isn't necessary.

Makes for a great physician, nurse assistant or standard documentation cart.

### Powered Display

Power supply outputs - 12V, 19V and 24V  
Integrated hot-swappable batteries (up to 3 batteries)  
Onboard and/or offboard charging
