## CCCP (Centrifugally Cast Concrete Pipe)

A spincaster is drawn through the pipe at a predetermined speed to evenly coat the interior of an existing pipe. The procedure is repeated until the desired thickness is attained.

CCCP pipe lining can be applied to pipes from 30" – 120" diameter with a maximum of 500' per segment. In instances where the access points to the pipe are greater than 500', a mid-section manhole may be required.

During the installation phase the pipe must be dry. After the last application by the spincaster, the pipe is ready for flow in 24 hours and will reach full cure in 28 days.
