Renewing your
FLOORS while maintaining
a **GREEN** PROCESS

AMERICAN CONCRETE CONCEPTS

Offering multiple flooring options for your facility

- We offer different levels of polished concrete to meet your needs
- We apply the industry leading performance coatings
- Highly durable joint, patch, and cap repairs that will last
- Best in industry surface preparation using planetary industrial grinders with diamond abrasives to ensure our coatings do not fail prematurely
- Whatever flooring option you choose, American Concrete Concepts offers a clean, dust free and professional installation

RESTORATION

If you are looking for a durable, low maintenance, and aesthetically pleasing option for your school, industrial, or retail floors, Polished Concrete is the answer!

ABRASION RESISTANCE IS RAISED 300% DUE TO THE POLISHING PROCESS!

- Maintenance is reduced dramatically - Customers average 60% savings in a five year life cycle over traditional flooring options
- Polished Concrete will maintain its luster long after installation and even longer with a maintenance program - resinous floors can lose luster very shortly after installation due to high traffic
- Polished Concrete is highly resistant to tire markings making it the logical choice for heavy fork truck areas
- Reduced vibration levels

EVEN THE MOST DURABLE RESINOUS FLOORS CAN BE COMPROMISED DUE TO MOISTURE AND POOR PREPARATION OF SUBSTRATE!

- A large percentage of resinous floors fail due to moisture beneath the slab or from poor floor preparation - Polished Concrete is breathable and not affected by moisture pressure.
- Independent testing under ASTM D7234-05 - Pull off Adhesion Strength of Coatings on Concrete has proven that planetary grinders, over shot blasting equipment, has the lowest failure rate making it ideal for preparing the floor for coatings while leaving a smoother flat profile reducing vibration levels

DURABLE FLOOR MARKERS

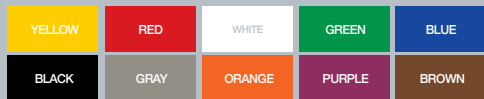

Tired of painting floor safety markers? Vinyl markers not getting the job done? Try it before you buy it - FREE tests in your facility upon request.

- 50 mil solid pvc construction ensures durability and longevity
- Patented beveled edges prevent catching and tearing.
- Changing production area friendly - markers reusable on most surfaces
- Fast and easy - no down time
- 5s friendly to bring your facility up to specification

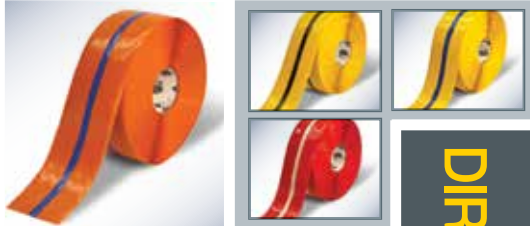

Floor Tape Solid

10 COLORS / 4 WIDTHS

Floor Tape Stripe

4 COLORS / 3 WIDTHS

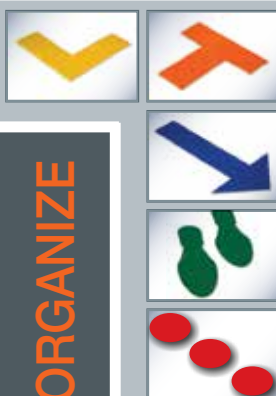

Floor Tape Glow

2 COLORS / 2 WIDTHS

Floor Tape Shape

14 COLORS / 5 SHAPES

MARK

Floor Tape Diagonal

3 COLORS / 4 WIDTHS

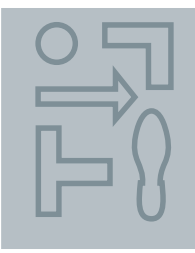

YELLOW WITH BLACK DIAGONALS
WHITE WITH BLACK DIAGONALS
WHITE WITH RED DIAGONALS

ALERT

Floor Signs

Industrial floor signs are great for marking safety areas. Floor signs come in a variety of standard options for you to choose from. Custom floor signs with your own logo or high resolution image are also available. Our floor signs are extremely durable and can handle rough industrial environments. Floor signs have a peel and stick adhesive.

RESINOUS COATINGS

We can install all types of resinous coating systems, whether USDA food and beverage requirements to thin mil flooring systems that are chemical and abrasion resistant. A good coating starts with great preparation of the concrete. We can assure you this will be done properly to give you a long lasting Resinous Floor.

- **Cementitious Urethanes/Mortar Beds**
- **ESD (Electro-Static Discharge)**
- **Anti Slip Flooring**
- **Primer / Topcoat Systems**
- **High Impact Flooring Systems**

DURABILITY & BEAUTY

By nature Polished Concrete is one of the strongest and most durable flooring options available. With the addition of a concrete densifier, polished concrete has become “The Everlasting Floor”. By using an element of construction that is inherent in the building process, polished concrete can be a great floor for the environment as well as your budget, but the true benefits show up with the maintenance savings.

Think GREEN

- Approved process by Green Building Council with LEED certification.
- A concrete floor reduces the environmental impact that new construction or demolition would generate. That makes it friendly to the environment
- The polishing process, mechanically and chemically, minimizes exposure to hazardous components-and environmental pollution both during construction and in the future
- Polished Concrete floor are 100% fire resistant
- Polished Concrete is a low-maintenance floor, with a maintenance plan that uses no dangerous chemicals and doesn't release any VOCs (Volatile Organic Compounds)
- An average of 30% increase in light reflectivity with Polished Concrete, dramatically brightening the work environment, thus saving on energy costs and increasing safety
- The exceptional durability of your floor means no demolition or disposal issues that come with maintenance or replacement of VCT, Tile or Terrazzo

OUR HISTORY

American Concrete Concepts has been in business since 2002. We are one of the true innovators in a rapidly growing industry. We have successfully completed over a thousand jobs. As one of the largest Concrete Polishing companies in the country we want to bring that experience to your project!
