

RAM

RAM PROMASTER

TCI Mobility™

QUALITY. DURABILITY. INNOVATION.

FEATURES

The Ram ProMaster® has several unique design features which make it an extremely versatile work horse. The Ram ProMaster® boasts a Class-Exclusive Front-Wheel-Drive (FWD) system that allows for nimble and responsive handling and with ProMaster's front-wheel-drive system, there's no driveshaft beneath the body, allowing room for a best-in-class lowest load floor height of 21 inches. With fewer parts to maintain, the FWD system also contributes to a lower lifetime cost of ownership.

The rear doors swing open 260 degrees, folding almost flat to the side of the van, providing an incredible amount of easy access. The sidewalls of the Ram ProMaster® are constructed at almost a 90° angle, making it easier to enter, maneuver, and position ambulatory patients and wheelchair clients alike. It allows multiple wheelchairs to be loaded side by side.
