# Express Enrollment & Dispense

**Mobile Solutions** ®
*By Elliott Data Systems, Inc.*

*Two software solutions designed to work together to perform an automated patient enrollment and medication dispensing process during a prophylaxis event.*

Express Enrollment is a website designed to register the public during a prophylaxis event prior to or at the arrival of attending a POD location. The solution captures contact information, family demographics, and important health data through an online medical questionnaire.

Express Dispense processes the data collected through Express Enrollment and distributes the prescribed medication at the POD which is managed by Elliott's Clinic Manager Solution to track medication, inventory and activity.

## Express Enrollment

The public accesses the Express Enrollment website using any PC device including:

> Desktop PC or Laptop
> Tablet Device
> Smart Phone

Each person enters their demographic data and fills out a medical questionnaire. The information collected can be grouped by family to streamline the dispensing process.

Patients fill out an automated medical questionnaire in Express Enrollment which processes the data and determines which medication is recommended for distribution based on the information entered for each person.

The person's information is then stored in a QR barcode tag and presented as a voucher for the patient to print and present at a local POD allowing them to bypass the enrollment process on-site and go directly to the medication dispensing area.

Patients can use Express Enrollment before arriving at the POD or enroll on-site. Multiple PC Kiosk stations are recommended for use at a POD location to assist in the on-site enrollment process for:

> Shorter Lines
> Faster Processing of Patients
> Freeing Up Resources
> A Reduction in Required Staff Support

## Express Dispense

Patients who have successfully enrolled through Express Enrollment present their printed voucher at the POD. Health Department staff scan the QR barcode on each person's voucher to review the contact information and the medication prescribed.

Once data is reviewed and prescription verified, the medication is scanned and distributed to the patient, greatly improving through-put.

Express Enrollment and Express Dispense are web based solutions designed to support Elliott's Clinic Manager Solution which manages public health event activity including through-put and the medication and supplies distributed at those events.
