Designed to completely integrate with Titan II's Production Processing, Job Costing and Payroll Modules, Titan's Timesheet Module is a powerful tool to accurately capture labor hours.

Pull-down lists are available to Employees for easy selection of Job and Work Orders or Phases and Cost Codes. Jobs and Work Orders can be restricted and filtered by production scheduling date.

Inexpensive tablet PCs can be simultaneously used to capture and record time in the office, in the plant, in the yard or on the road.

Managers can scan through time entries by utilizing the Timesheet Review Screen and quickly view Totals by Production Department.

Recorded hours can be used to directly update production entries and /or job costing entries. Time can also be directly loaded into Titan's Payroll Processing Screen if required. Various Timesheet Reports and Data Export features are also available.
