- Capture Structure ID
- Capture Structure Type
- Capture Structure Code
- Capture Top Elevation
- Enter Number of Holes
- Capture Hole Elevations
- Move between Structures
- Enter New Structures

Titan's Onscreen Protractor was designed to make capturing structure information easy. Whether using Titan's Visual Takeoff program, Titan's Quick Quote Screen or an Excel Spreadsheet, angles can quickly be determined by the drag of a mouse.

Titan's Onscreen Protractor floats on top of any type of onscreen plan including PDFs and AutoCAD drawings.

When used with Titan's Quick Quote Screen or an Excel Spreadsheet, new structures can be entered directly from the Protractor without the need of moving your focus away from your plans to another screen. Structure ID, Structure Type and Structure Code can all be directly entered into the Protractor along with elevation heights and pipes.

Structures loaded into Titan's Quick Quote Screen can be loaded into Titan's Visual Takeoff program and automatically stacked.
