# Free-Span Canopy

## with Curved ZIP-RIB

Building on the strength achieved with .050 aluminum curved ZIP-RIB roof panels, it is possible to either greatly reduce or eliminate the need for curved rafters and/or purlins in certain canopy applications. Free-Span canopies can be safely designed to spans of 16 feet without intermediate purlins. Available in 12" or 16" wide panels. Contact M&E for your specific design requirements.

**Applications:** Walkways - Stairways - Skyways - Pedestrian Bridges - Transit Station Enclosures - Entrances - Dormers

Climate Controlled Passageways - Inquire about our insulated canopies; a unique "double wall" design providing the roof insulation and ceiling in a composite assembly.
