

ZIP-RIB

CURVED

to meet your most

SOPHISTICATED DESIGN

ZIP-RIB

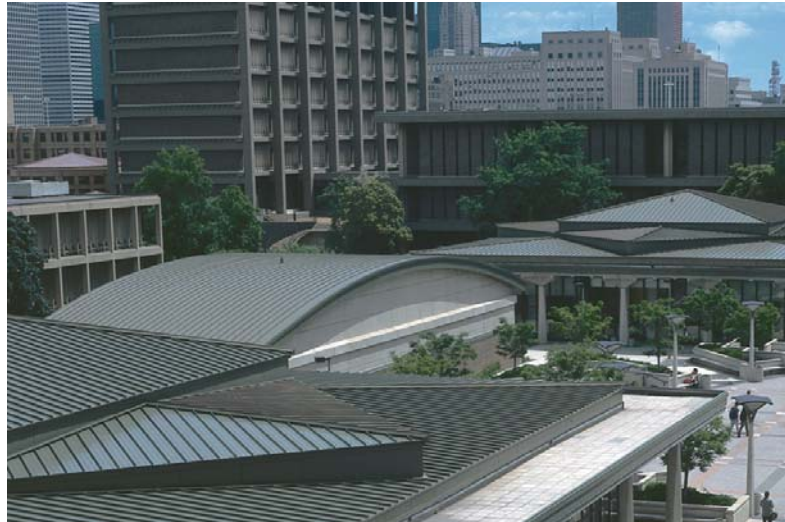

Since 1964, **ZIP-RIB** has set the standard for high performance standing seam metal roofing.

The first structural/functional standing seam metal roof system that utilized concealed clips to allow for thermal expansion and contraction yet resistive to wind uplift forces, **ZIP-RIB** has set the standard ever since 1964.

Used on thousands of projects throught the world, this roofing system is chosen for its ability to protect as well as beautify.

Now, **ZIP-RIB** can be curved to radii that no other structural panel can achieve. Once limited to purely architectural cladding (with little or no quantifiable performance data), designers can now specify the most thoroughly time-tested system available AND get documented testing to assure product performance in the most severe of environments.

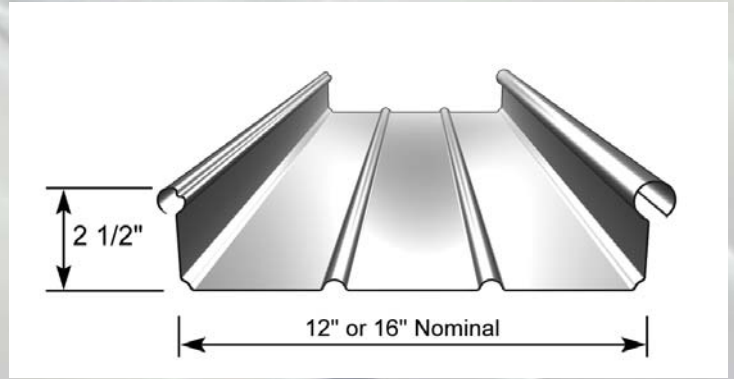

Challenge Merchant & Evans on your next curved project.

FEATURES

- ★ Corrosion resistant, long lasting durable aluminum substrate (contact Merchant & Evans for alternative substrates in other applications)
- ★ High strength 3004 alloy 3/4 hard aluminum for structural performance.
- ★ 2 1/2 inch high, mechanically crimped seams for weather-tightness and wind uplift resistance.
- ★ Fully documented performance testing including Dade County and New York MEA approvals, ASTM E-1592, static and dynamic wind and water tests, UL-90 Classified, various UL fire listings, UL Class A fire rating and thermal cycle tests just to name a few.
- ★ Technical support including: in-house engineers, technicians, and draftsmen.
- ★ Field support from knowledgeable Product Marketing Managers to assist with application analysis, specification writing, and CAD details.
