

DEMO SESSIONS

WEDNESDAY, AUG. 8

11:30 – Noon | *How Plumbing Systems and Water Conditions Interactions Can Affect Home Performance*

Presented by FlowGuard Gold Plumbing Systems

Everything is bigger in Texas, that includes our cities and water districts. As our communities continue to grow, water utilities are struggling to keep up with demand and ensure clean, safe drinking water for our newest communities. The resulting changes to water treatment and water conditions can have unexpected impacts on domestic plumbing systems resulting in potential water quality and home performance impacts that can be costly for Texas builders. This presentation will review the interactions between water conditions and domestic plumbing systems and what they mean for total home performance – including builder liability and homebuyer experiences with their plumbing systems.
