#### MY NEW FRIENDS,

Just think, in one month our faith journey together will finally begin and it only took five years. I cannot help but think how much I have grown in that time, and I am thankful to God for all He has brought my way.

Although I had no idea that my future would lead me to Saint Peter again, I did keep an eye on your community as well as keeping you all in my prayers. Leaving a church to find a powerful thing in one's life. But, I kept up on the news from Saint Peter by way of the bulletin and other sources of information, I knew you were doing well and that you were growing stronger as a parish family. It is ironic how God works! And, I am thrilled that He has brought me once again to Libertytown!

I have shared a lot with you all already, and I am sure many of you have questions. What is the new pastor like? Is he a nice guy, or mean guy. How does he do things, etc., etc. Even though you will need to draw your own conclusions, I would like to think of myself as a good person. I like people to feel welcome and wanted. But, should you have any particular questions, please feel free to e-mail me at [JWorley@Archbalt.org](mailto:JWorley@Archbalt.org) (please no forwards or junk mail).

Until next week, God Bless,  
Fr. Jason

Message is %a fair and just health care reform bill must exclude mandated coverage for abortion, and uphold long standing laws that restrict abortion funding and protect conscience rights+. At the moment, 4 of the 5 bills considered by the House and Senate call for government involvement in health care. Abortion is mandated as a reproductive %ervice+, tax-funded, and the conscience clause is gone. There is concern with rationed health care for seniors, Sen. Mikulski put the abortion mandate in the Senate version and we can indicate our disapproval. You may call Sen. Mikulski at 202-224-4654 or 410-263-1805, Sen. **RESPECT LIFE CORNER-EUTHANASIA:** Euthanasia literally translated from Greek means %good death+. Some who promote euthanasia call it %mercy killing+ death by euthanasia is neither good nor merciful. Therefore, a more accurate term would be %imposed death+. • You may ask: Why should I be concerned? Because the whole human race has a stake in the answer to the question, %Should imposed death be permitted and regulated by law?+ History teaches us that a society which does not respect and protect all human life will ultimately bring about its own destruction. Allowing certain people to be killed because their lives are viewed as %not worth living+ or %burdensome+ has profound repercussions for all of us. Devaluing one human life devalues all human life. - Imposed Death by the HLA (Human Life Alliance)

## Pro-Life Education Needed Because Many Still Don't Know the Facts!

Recently Maria Vitale of the Pennsylvania Pro-Life Federation shared that a woman called her to find out what exactly happens in an abortion--that despite being a mother, grandmother and great-grandmother she still didn't know what an abortion really is. Vitale reflected that news articles on abortion contain no definitions of terms. Pro-abortion organizations do not talk about the specifics and give the impression that pregnancy is some abstract medical condition that can

be made magically to disappear. The result is that many people still do not realize that it is the taking of an innocent human life and that babies already well developed are torn limb from limb inside their mother's body and their body parts sucked out.

So study the information below and be ready to tell others who say they are "pro-choice" what happens to an unborn child in an abortion. We cannot continue to be silent about these horrors occurring in our country.

### First Trimester

#### Development\*

##### Week 10

The most critical part of the development is complete. Now a period of rapid growth is beginning. The head is now about half its length - Soon the rest of the body's growth will catch up. Eyelids fuse shut and irises begin to develop. Eye color is also determined by this point.

##### Week Eleven

These little human feet are perfectly shaped. At this point, the baby has eyelids, fingernails, and fingerprints, and can even grasp an object placed in the hand. The kidneys begin to form urine and the baby begins to mimic the movements of breathing.

From this point on, there is only growth in the size and maturation of the organs already present. All body systems are in place and active. The baby has a skeletal structure, nerves and circulation

#### Abortion Procedures\*

##### Suction Aspiration

Suction aspiration, or "vacuum curettage," is the abortion technique used in most first trimester abortions. A powerful suction tube with a sharp cutting edge is inserted into the womb through the dilated cervix. The suction dismembers the body of the developing baby and tears the placenta from the wall of the uterus, sucking blood, amniotic fluid, placental tissue, and fetal parts into a collection bottle.

Great care must be taken to prevent the uterus from being punctured during this procedure, which may cause hemorrhage and necessitate further surgery. Also, infection can easily develop if any fetal or placental tissue is left behind in the uterus. This is the most frequent post-abortion complication.

##### Dilatation (Dilation) and Curettage (D&C)

In this technique, the cervix is dilated or stretched to permit the insertion of a loop shaped steel knife. The body of the baby is cut into pieces and removed and the placenta is scraped off the uterine wall. Blood loss from D & C, or "mechanical" curettage is greater than for suction aspiration, as is the likelihood of uterine perforation and infection.

This method should not be confused with routine D&C's done for reasons other than undesired pregnancy (to treat abnormal uterine bleeding, dysmenorrhea, etc.).

### Second Trimester

##### Week Sixteen

Around the 16th week, the baby becomes large enough and active enough for the mother to feel the child's movement. What first feels like a flutter eventually manifests itself in turns, kicks, somersaults and other movements that at some point even become visible to the outside.

Other more delicate movements, missed by the mother, have been recorded during this time frame. In the fourth month, researchers looking at the child have seen the child making fine finger movements, wiggling his or her toes, and even making a fist.

##### Dilatation (Dilation) and Evacuation (D&E)

Used to abort unborn children as old as 24 weeks, this method is similar to the D&C. The difference is that forceps with sharp metal jaws are used to grasp parts of the developing baby, which are then twisted and torn away. This continues until the child's entire body is removed from the womb. Because the baby's skull has often hardened to bone by this time, the skull must sometimes be compressed or crushed to facilitate removal. If not carefully removed, sharp edges of the bones may cause cervical laceration. Bleeding from the procedure may be profuse.

##### Salt Poisoning

Otherwise known as "saline amniocentesis," "salting out," or a "hypertonic saline" abortion, this technique is used after 16 weeks of pregnancy, when enough fluid has accumulated in the amniotic fluid sac surrounding the baby. A needle is inserted through the mother's abdomen and 50-250 ml (as much as a cup) of amniotic fluid is withdrawn and replaced with a solution of concentrated salt. The baby breathes in, swallowing the salt, and is poisoned. The chemical solution also causes painful burning and deterioration of the baby's skin. Usually, after about an hour, the child dies. The mother goes into labor about 33 to 35 hours after instillation and delivers a dead, burned, and shriveled baby. About 97% of mothers deliver their dead babies within 72 hours.
