

"And for you?"

"Western omelet -- egg whites only please."

"Very good- right away!"

Bananas Foster - Whoosh! The flame soars to thrilled "oohs" and "aahs" from the crowd.

Just like hanging out with friends in the kitchen when you have a dinner party at home, there is something special about cooking food for people and serving it hot - right off the stove. But you have fifty guests at this brunch and the kitchen is a thousand feet away from the ballroom. That is where the magic of induction cooking comes in. With electromagnetic cooking and warming equipment you open a whole new world of possibilities in entertaining - safely, efficiently, and most importantly, with style and flair!

At Lion's Wood Banquet Furniture, our commitment to making it easy for you to do your job and look good while doing it results in beautiful transformations of our most popular tables from serving buffets to sophisticated pieces of cooking equipment.

Think of them as stoves really - disguised as furniture. You decide how to use our designs in your operations. In this brochure we will introduce you to our surface-mount induction lines, provide you with the options we offer and show you the Lion's Wood Banquet Furniture tables capable of incorporating induction.

# Induction Cooking

## Induction Specifications

### Lion's Wood Banquet Furniture's

heavy-duty commercial induction tables are designed for versatility, durability and efficiency. These surface-mounted units may be used as cooking units or as warming units. They are extremely efficient; you may have up to two omelets cooking on a single 20-amp outlet, or run up to eight chafers on a single 20-amp outlet for warming stations. (Induction cooking tables may also serve as warming stations.)

### The Lion's Wood Induction Advantage

No need to buy new chafers and display pieces. Our induction units work with most cast iron or induction-ready chafers and pans. We do not push you into a system designed to work with a proprietary set of cookware, so we are free to offer an induction system that is designed to allow you to use your existing pieces or the manufacturer of your choice for pots and pans. Efficiency of induction energy production is our focus. The induction equipment we build into our furniture is patented, cutting edge design, because that is what you want - and what you deserve in your induction equipment choices.

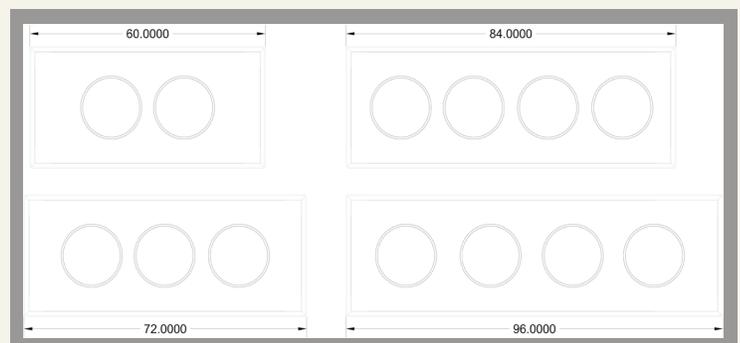

### Our Revolutionary Induction Warming and Cooking Units:

- Efficiently warm chafers using 200-300 watts.(That's 1.8 - 2.5 amps each!)
- Also have an operating range of up to 1200 watts for live cooking for your guests.
- Can run up to 8 chafers on a dedicated 20 amp outlet on warming function.
- Do not heat the tabletop surface, only the chafing dish is heated.
- Feature a control panel that is capable of being hidden from view when not in use.
- Are GREEN ; no fumes, flames, CO<sup>2</sup>, chemical smells, and - NO empty cans in our landfills!
- Hold an even, constant heat.
- Heat continuously for up to 9 hours non-stop with programmable controller on warming settings.

### Sizes of Induction Tables

We offer induction tables in four standard sizes and a corresponding number of induction units:

- 30" x 60" with up to two units per table,
- 30" x 72" with up to three units per table,
- 30" x 84" with up to four units per table,
- 30" x 96" with up to four units per table.

## Induction-Adaptable Lines

### Lion's Wood Banquet Furniture Induction-Adaptable Lines of Tables

These are the tables we offer into which we install induction equipment. Please choose a line from these offerings and refer to the available literature for that line to learn more about the materials, finishes, shapes, sizes and other accessories available within that particular line of tables. Consult with your local Lion's Wood Banquet Furniture representative to learn more and to explore all of our offerings. Some of these are available in suites, related furniture groupings that allow you to create a seamless environment for your guests.

### Hide-away Control Panels

Induction controls may be mounted in hide-away panels that swing out of sight when not in use. These four images illustrate the difference that makes -- set them and forget them, then hide them away.
